

Currently, I am pursuing my Master's in Cognitive Science and Artificial Intelligence, making this position ideal for me. I hold a Bachelor's degree in Psychology (graduated with honors, average = 9.1), so I have a deep understanding of various branches of psychology, including Developmental Psychology and Cognitive Science. I currently work as a Data Science Intern at IFF in the Cognitive Science department, which provides me practical experience in completing real-life coding tasks for the company using Python. I don't earn much there (400 euros), so I am highly motivated to contribute my skills and knowledge to your team, because the compensation is adequate, plus it relates to psychology, which is one of my main interests. Even if I won't be familiar with something, I am eager to close the knowledge gap as soon as possible
